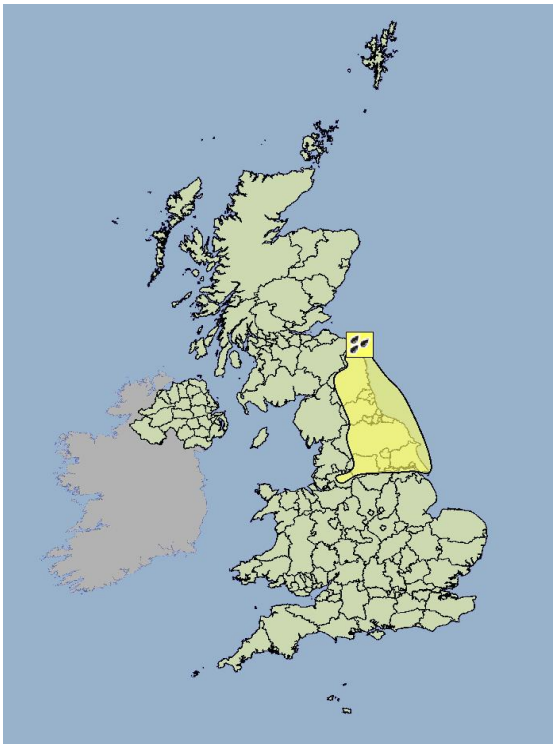
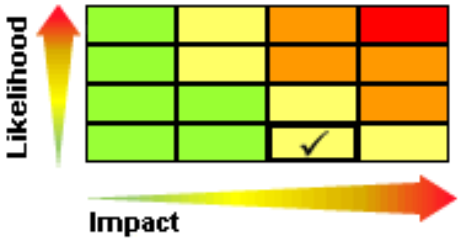
National Severe Weather Warning Service





Chief Forecasters Assessment
Some 20-30 mm of rain may fall in 6 hours in places whilst 30-50 mm may occur locally through the whole period, the greater risk of this being across parts of northeast England where the rain becomes most persistent. There remains some uncertainty in timing and extent of the northward spread of the rain.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Mon, 21st Nov 2016** until **06:00 on Tue, 22nd Nov 2016**

A broad area of heavy, persistent rain will move northwards, reaching the extreme northeast of England later on Monday. The rain should turn more showery across the south of the warning area by Monday evening with the more persistent rain probably becoming confined to Northumberland and Durham by the start of Tuesday. Strong northeasterly winds will also develop across the north of the area giving gusts of 40-50 mph.

Please be aware of the possibility of localised flooding and disruption to transport.
